

# ProVision Lite

## Introducing ProVision Lite

ProVision Lite offers the same core functionality as legacy ProVision but is targeted to just support the latest releases of Avaya Aura devices. ProVision Lite does not include the full payload of advanced features and adjunct tools associated with legacy ProVision.

ProVision Lite is a perfect tool for day-to-day MACD activities, simple configuration updates, system archival, and real-time transaction reports. Deployment in virtual/remote locations is another good use case, where it can be leveraged in conjunction with legacy ProVision during extensive migration/upgrade projects.

ProVision Lite has its own subscription package, separate from legacy ProVision. When licensing ProVision Lite, you will use the 'PVN Lite' package. The licensing process, via the ProVision portal, is the same as with legacy ProVision. The distinct subscription and license key combination ensures all expected functionality is available and not confused with legacy ProVision.

# ProVision Lite

## Legacy vs ProVision Lite... What's the Difference?

- Each has a its own installer (executable) available on the portal's download page.
- Each has its own subscription package(s) available on the portal's licensing page.
- Both are the same at their core - the separate installers and licensing regulate feature availability.
- Only one (Legacy or Lite) can be installed on a single machine.
- Only Legacy supports add-on packages for expanded features and functionality
